Recovering the Flooded Water Tunnels Under the Lake at Milwaukee

100 Percent Efficient

Under all kinds of traffic and climatic conditions the Lug is a strong factor of safety.

The flexibility of the blocks under expansion, when laid with an open joint Kreolite Lug Construction, prevents the possibility of buckling, the wedge shaped lugs compressing when the books expand.

The lugs permit the bituminous filler to penetrate the full depth of the blocks on all sides, thus making a wear and waterproof pavement.

The compression of the lugs under expansion also retards bleeding.

The lugs afford a foothold for horses and automobiles equipped with tire chains.

Let our experts help you solve your paving troubles. They will gladly help you on request.

The Jennison-Wright Company, 79 Kreolite Building, Toledo, Ohio
